

A close-up photograph of a silver stethoscope resting on a wooden surface. In the foreground, a small, detailed model of a blue and red airplane is visible. The background is softly blurred, showing the stethoscope's tubing and the wood grain. The image is framed with red and grey geometric shapes in the corners.

MEDICAL TOURISM

Travel for better health

Health & Wellness

Al MURAN Medical tourism can be defined as the process of traveling outside the country of residence for the purpose of receiving medical care. Growth in the popularity of medical tourism has captured the attention of policy-makers, researchers and the media. Originally, the term referred to the travel of patients from less-developed countries to developed nations in pursuit of the treatments not available in their homeland.

Today we are experiencing both qualitative and quantitative shifts in patient mobility, as people travel from richer to developing countries in order to access health services. Travelers can thus take advantage of their visit by sightseeing, taking day trips or participating in any other traditional tourism activities.

COST

As healthcare costs in the US, UK , Middle east and other parts of the world are excessively soaring, many employers and insurance companies started to view medical tourism as a way to lower them. More and more countries around the globe are starting to see the financial benefits from this emerging market, so they offer premium medical services at notably lower prices. The primary reason that clinics and hospitals in the developing countries are able to lower their prices is directly related to the nation's economic status.

QUALITY

There are two major components of the service quality in the health care sector - technical or mechanical quality and serviceable or functional quality.

A key to overcome it is using adequate marketing strategies and quality assessment via accreditation from an internationally recognized institution. This confidence can be even stronger if accreditation is followed by an affiliation with reputable hospitals or health care systems in industrialized countries.

TREATMENT TYPES

The most common types of procedures that patients pursue during medical tourism trips are elective physical checkups, cosmetic surgery, dentistry, cardiac surgery, cancer treatments ,orthopedic surgery,ayurvedic therapy, traditional medicine therapy and so on.

In addition to cost, other major factor responsible for the increase of medical tourism is access. The lack of it, either due to the unavailability of the technology or the prohibition in the home country, can subsequently lead to medical tourism

ĀYURVEDA

Ayurveda aids in healing the body naturally. Ayurveda revolves around the concepts of tridoshas (3 humours), dhatus (body tissues), and malas (waste eliminated from the body). If any disturbance from this constitution, then body and mind get affected, leading to pathogenesis.

Ayurveda treatises describe three elemental doshas viz. vāta, pitta and kapha, and state that balance (Skt. sām̐yatva) of the doshas results in health, while imbalance (viṣamatva) results in disease. Ayurveda treatises divide medicine into eight canonical components. Ayurveda practitioners had developed various medicinal preparations and surgical procedures from at least the beginning of the common era.
